CAREER OBJECTIVE

Python Backend Developer with 1 year of experience building scalable APIs and AI-powered applications using FastAPI, Django, SQL, Docker and AWS. Experienced in integrating LLMs, RAG pipelines and traditional Machine Learning-driven solutions, including model deployment, monitoring and lifecycle management.

EXPERIENCE

Python Developer

PlusYourSoftech Business PVT LTD (Remote)

Feb 2024 - Jan 2025

1. AI-Powered PDF Chat System [\[Link\]](#)

- Built an **AI-powered** document intelligence system for Digital Signature Platform using **LangChain**, **OpenAI API** & **Pinecone** enabling natural language querying over user-uploaded legal documents & contract PDFs.
- Developed **FastAPI** backend services with **PostgreSQL** for user management and API usage tracking; deployed on **Render** and collaborated with the frontend team to integrate AI-powered features into the platform.

2. AI-Powered Discord bot for Alfresco Community [\[Link\]](#)

- Built an **AI-powered Discord Bot** for **Alfresco**(Open-Source DMS) community, enabling users to manage files and folders via chat commands without accessing the Alfresco's web interface.
- Integrated **Discord API**, **Alfresco API**, **LangChain**, **OpenAI** & **Pinecone** to enable natural language file operations, content retrieval and document querying; enhanced with **OCR** support using **Tesseract-OCR** for scanned PDFs & Images.
- Dockerized** the application and deployed on **Render** for production use.

PROJECTS

Drift Shield : ML Model Monitoring & Lifecycle Management [\[Link\]](#)

- Built an end-to-end loan default prediction system using **FastAPI**, **Streamlit** and **XGBoost**, generating loan default predictions and prediction probabilities with LLM-powered risk analysis, positive factor insights and personalized loan amount and repayment tenure recommendations.
- Implemented automated **Data Drift Detection** using **Evidently AI** by comparing production inference logs stored in PostgreSQL (**AWS RDS**) with reference training data, generating HTML reports and LLM-powered human-readable summaries.
- Developed a **Model Registry** to upload trained models, scalars, evaluation metrics and training datasets, enabling model version management and zero-downtime activation through REST APIs; uploaded artifacts are persisted on **AWS EBS** volume.
- Dockerized** and deployed the application on **AWS** with **CI/CD** using **GitHub Actions**, following a decoupled **FastAPI** backend and **Streamlit** frontend architecture.

ScanXtract : Docker-based OCR engine [\[Link\]](#)

- Built and published a production-ready **Docker** image using **FastAPI** and **Tesseract-OCR** to extract text from scanned PDFs and images via REST APIs, requiring no environment setup.
- Designed for plug-and-play use in document processing pipelines and data extraction workflows; fully documented and publicly available on Docker Hub.

SKILLS

Languages & Frameworks - Python, FastAPI, Django

AI / ML Libraries - Pandas, Numpy, Matplotlib, Scikit-Learn, Machine Learning, LangChain, Pinecone, OpenAI API & LLMs

Cloud & Database - AWS (EC2, EBS, S3, ECR, RDS), Docker, Github Actions, Render, PostgreSQL, MySQL

EDUCATION

Mirza Ghalib College, Magadh University (Gaya, Bihar)

2020-2023

Bachelor of Computer Application (BCA) | 68%
